

Aarav: "Hey Riya, have you thought about what you want to do after we finish school?"

Riya: "Hi Aarav! Yes, I've been thinking a lot about it lately. I want to become a software engineer. I'm fascinated by how technology can change the world, and I want to be part of that change. What about you?"

Aarav: "That's awesome! I'm actually leaning towards environmental science. With all the climate change issues, I feel like it's important to work on sustainable solutions for our planet."

Riya: "That sounds really noble. We both seem to have plans that can make a big difference. How do you plan to pursue environmental science?"

Aarav: "I'm looking at universities that offer strong programs in environmental studies. Plus, I want to get involved in local conservation projects to gain practical experience."

Riya: "Practical experience is definitely important. As for me, I'm planning to join coding bootcamps and participate in hackathons. It's a great way to build skills and meet like-minded people."

Aarav: "True, networking is key in any field. Do you ever worry about the competition though? The tech industry is booming, but it's also very competitive."

Riya: "Sometimes, but I believe that with hard work and continuous learning, I can make it. Besides, the industry is always evolving, so there are always new opportunities."

Aarav: "I admire your optimism! For me, the challenge is making sure that environmental science doesn't just become a trend but remains a long-term commitment for people."

Riya: "With your passion, I'm sure you'll inspire others to see it that way too. We should probably start looking for internships soon as well."

Aarav: "Definitely. Let's help each other out and share any good opportunities we come across."

Riya: "Agreed! It's exciting to think about the future, isn't it?"

Aarav: "It really is. Let's make our dreams a reality!"
